

Clouds and climate: Radiation, circulation, and precipitation

Introduction. Science of Science for the Literature on Clouds and Climate Over the Past 50 Years

Section 1: Clouds and the Terrestrial Radiative Balance

Chapter 2. An Overview of Aerosol-Cloud Interactions

Chapter 3. Ice Crystal Complexity and Link to Cirrus Cloud Radiative Effect

Chapter 4. Cloud-Radiation Interactions and Cloud-Climate Feedbacks from an Active-Sensor Satellite Perspective

Section 2: Cloud Types

Chapter 5. A Review of the Factors Influencing Arctic Liquid-Containing Clouds: Progress and Outlook

Chapter 6. Extratropical Cloud Feedbacks

Chapter 7. Tropical Marine Low Clouds: Feedbacks to Warming and on Climate Variability

Chapter 8. Mechanisms for the Self-Organization of Tropical Deep Convection

Chapter 9. An Overview of Mesoscale Convective Systems: Observations, Modelling, and Climate Variability

Section 3: Clouds and Circulations of Different Scales

Chapter 10. Interactions between Tropical Clouds and Large-Scale Circulation in Present and Future Climate

Chapter 11. Clouds and Radiatively-Induced Circulations

Chapter 12. Small-Scale Mixing and Its Impacts on Micro- and Macroscale Cloud Properties

Section 4: Clouds and Precipitation

Chapter 13. Precipitation Efficiency and Climate Sensitivity

Chapter 14: Scaling of Precipitation Extremes with Surface Temperature and Convective Available Potential Energy

Chapter 15: Liquid versus Ice Phase-Initiated Precipitation

Chapter 16: Satellite Precipitation Measurements: What Have We Learned About Cloud-Precipitation Processes from Space?

Outlook. Machine Learning for Clouds and Climate
